## 4140 High Strength Tool Steel

Our tool steel is delivered fully annealed. This grade can be easily water hardened, but for best results quench in oil (room temperature) at $1550^{\circ} \mathrm{F}$. Do not allow to get cold but while still hand warm, draw temper one hour for each inch of thickness.

Approximate Delivered Physical Properties:

| Hardness | Brinell 205 |

## Abrasion Resistant Plate

This machinable wear plate is unmatched for resistance to impact or abrasion or a combination of both. The high hardness of 400-445 Brinell will work harden with use. Tensile strength: 220,000 psi; Yield point: 200,000 psi.

## W-1 Drill Rod

Water Hardening is the most popular, versatile and least expensive grade of ground and polished drill rod. Its high carbon content allows it to be used often without heat treatment for maintenance applications. Heat thoroughly at $1425^{\circ} \mathrm{F}$ $1500^{\circ} \mathrm{F}$. Hold one-half hour per inch of section, quench in water (brine). Sizes below 9/32-inch diameter may be quenched in oil.

## O-1 Drill Rod

Oil hardening drill rod is an electric furnace melt tool steel supplied in a fully spheroidized $100 \%$ decarb free condition. A non-shrinking general purpose tool steel, it has excellent abrasion resistance, toughness, and machinability characteristics. For heat treating section smaller than $1 / 4^{\prime \prime}$, heat to $1450^{\circ} \mathrm{F}-1475^{\circ} \mathrm{F}$ and hold until heated through. For larger sections, preheat to $1200 \cdot F$, then raise to $1450^{\circ} \mathrm{F}-1500^{\circ} \mathrm{F}$ to hardening temperature, hold one-half hour per inch of cross section. Quench in oil at $125^{\circ}-150^{\circ} \mathrm{F}$ and temper immediately.

Aluminum Plate (3003-H14)
This alloy is used for pots, pans, tanks, and chemical equipment. It's a general purpose alloy for moderate strength applications with excellent workability, weldability, and high corrosion. Mechanical properties: tensile strength-22,000 psi; yield strength-21,000 psi; shear strength-14,000 psi.

Aluminum Plate (5052-H32)
This alloy is the strongest non-heat-treatable plate in common use. Its good workability, toughness, and excellent resistance to salt water corrosion make it ideal for transportation uses, appliances, and chemical drums. Good weldability with mig or tig systems. Mechanical properties: tensile strength-33,000 psi; yield strength-28,000 psi; shear strength-20,000 psi.
